

One important thing: On the following pages, you will encounter a series of measurements, which should be taken with a grain of salt. I made these estimates by hand-measuring my own golf club. There were also a lot of complex lofts and angles, which may result in you having a slightly different build as compared to mine. Play around with things, and figure out what works best!

I hope you enjoy my 60 degree golf club assembly!

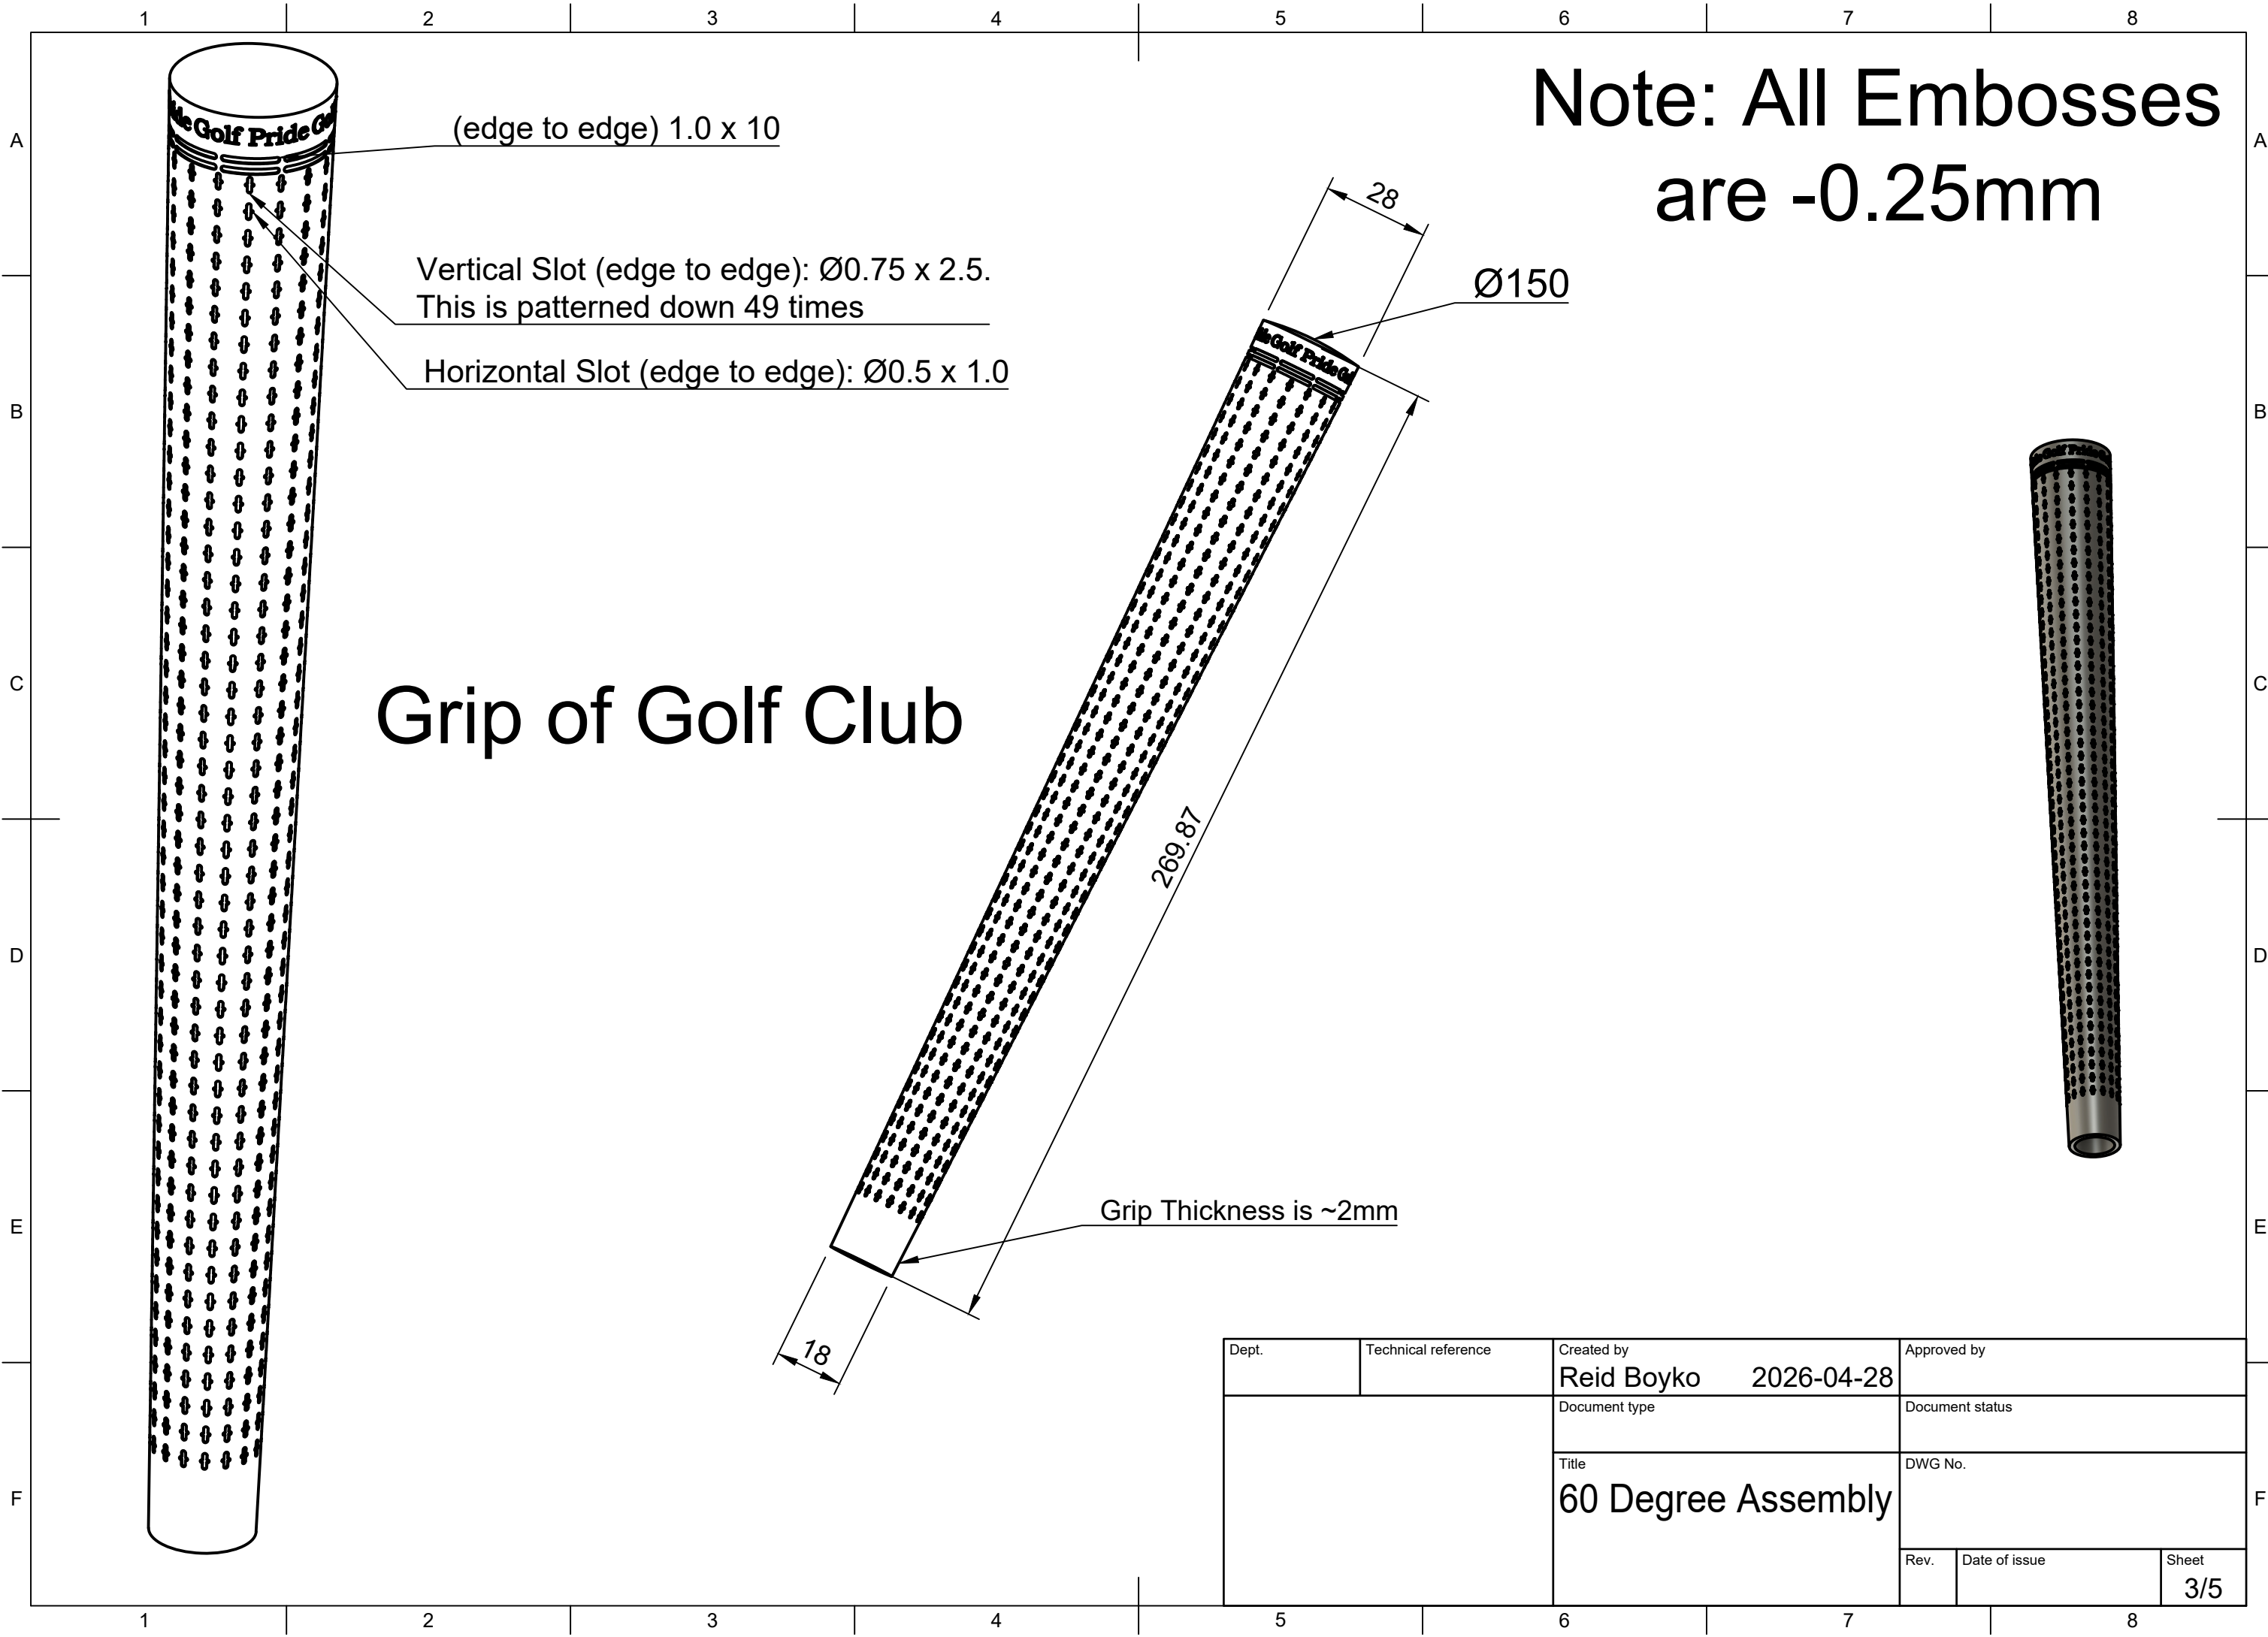

-Reid Boyko

Face of Golf Club

Note:

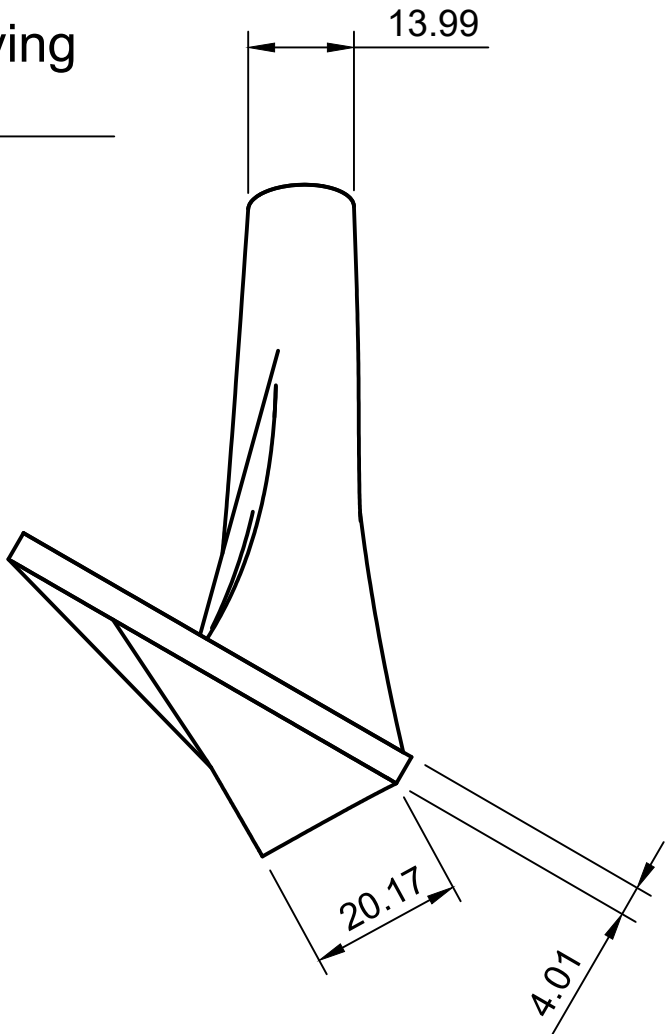

Arcs of the face are as follows (in radii):

- Bottom: 250mm
- Bottom left: 17mm
- Left: 55.7mm
- Upper Left: 53.72mm
- Upper: 11.59mm
- Upper: 25.98mm
- Upper Right: 150mm

'bottom' and 'upper right' connect to that 15mm vertical edge

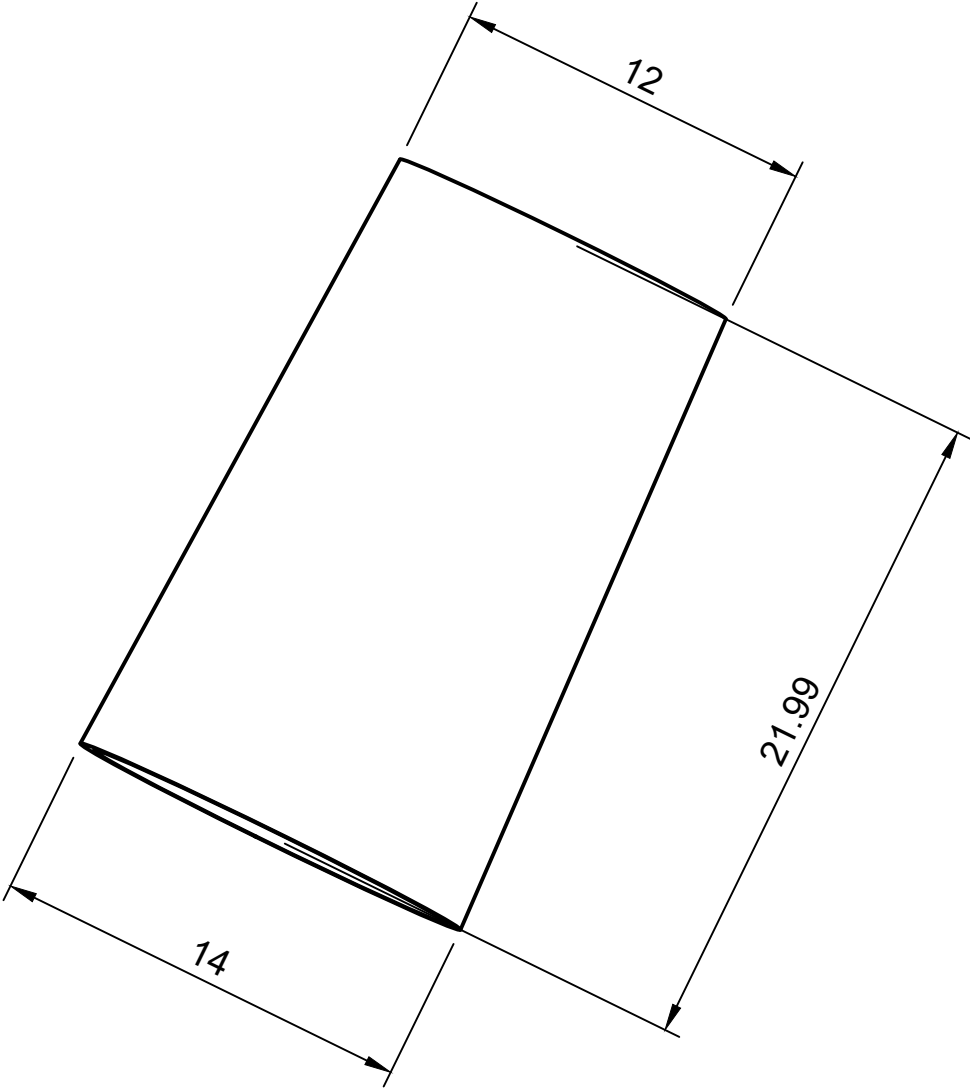

This lofted face is offset 72mm from the face of the club (after applying the angles specified below)

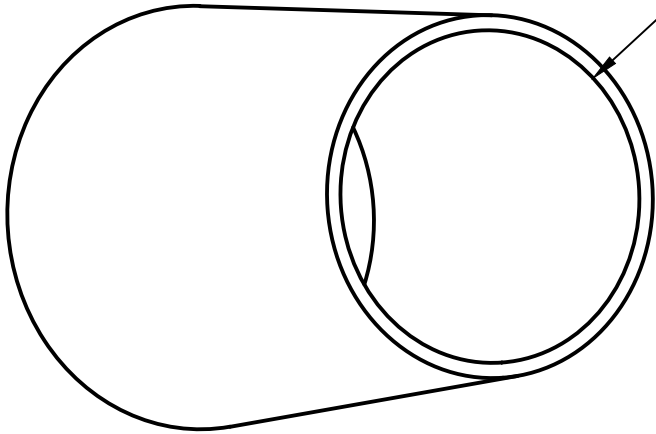

Note: Club shaft is tilted 60 degrees away from the face and 35 degrees upward
